

DUCKS

Grower 4-5 week

Intended use:

Balanced feeding is of great importance for breeding Mulard ducks. To achieve optimal results, it is expedient to use different compound feed during the three phases of fattening – starter, grower and finisher, thus providing balanced energy - protein levels, avoiding formation of excess fat in the ducks body.

The products for Mulard ducks provide good health status of the flock, excellent slaughter parameters, quality liver and well-developed duck breast.

Ducks Grower 4-5 weeks – complete compound feed, meeting the specific needs during the intensive growth period and fattening of ducks.

Ingredients:

- Selected cereal raw material – combination of high-protein vegetal sources.
- Essential amino acids.
- Enzyme complex – improves absorption of nutrients, increases nutritive and energy value of fodder, increases average daily growth rate, improves fodder conversion, phytase enzyme decreases phosphorus excretion in nature. Vitamin and mineral premix – contains the necessary minerals, vitamins, macro- and micro-elements.
- Optimal Calcium-Phosphorus and Sodium-Chlorine ratio.

Crude protein	17,5 %
Crude fibre	5 %
Crude fat	2,8 %
ME birds MJ/kg.	12
Lysine	0,8 %
Methionine	0,45 %
Calcium	0,9 %
Digestible Phosphorous	0,35 %

Feeding recommendations: Ad libitum during the period 4-5 weeks after hatching.

Production form: pellets 4 mm

Packaging: bulk, 25 kg, 40 kg

The compound feed contains no raw materials of animal origin!
